## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 27<sup>th</sup> 2009 has been entered.

### ***Response to Amendment***

2. Applicant has amended claims 1, 14-15, 17-19 and 32-34. Claims 2-13, 16, 20-31 and 35-38 have been cancelled. Claims 1, 14-15, 17-19 and 32-34 are pending.

3. Applicant's remarks in view of the newly presented amendments are found to be persuasive. The pending claims are found to be in condition for allowance with the addition of the Examiner Amendment listed below.

## **EXAMINER'S AMENDMENT**

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as

Art Unit: 2624

provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with J. Randall Beckers, Reg. No. 30,358 on Friday May 8<sup>th</sup> 2009.

The following claims should be amended as follows:

1. An image lightness level estimating method for estimating a lightness level of an image, comprising:

dividing an original image into a plurality of image sub-areas according to tone level information of pixels forming the image;

~~computing, by a processor, an average lightness of the plurality of sub-areas producing lightness amounts;~~

Deleted: and

computing a statistic amount for estimation of the lightness level of a whole of the original image using the average lightness for each of the plurality of sub-areas; ~~and~~  
~~correcting the original image using the statistic amount.~~

14. (currently amended) An image correcting method for correcting an original image, comprising:

dividing an original image into a plurality of image sub-areas responsive to tone level information of pixels forming the image;

~~computing, by a processor, an average lightness of the plurality of sub-areas producing characteristic amounts;~~

computing a statistic amount for estimation of the lightness level of a whole of the original image using the average lightness for each of the plurality of sub-areas;

comparing the statistic amount with a predetermined value;

determining a correcting parameter based on the comparison result; and

correcting the original image using the correcting parameter.

15. (currently amended) An image correcting method for correcting an original image, comprising:

generating a plurality of corrected images by correcting the original image using a plurality of different correcting parameters;

dividing the plurality of corrected images respectively into a plurality of image sub-areas responsive to tone level information of pixels forming the image;

computing, by a processor, an average lightness for the plurality of sub-areas corresponding to the plurality of corrected images;

computing an image statistic amount indicating a lightness level of a whole corrected image using the average lightness for the plurality of sub-areas for the plurality of corrected images; and

defining a corrected image obtained using a correcting parameter corresponding to an image statistic amount closest to a predetermined value among the image statistic amounts as an appropriate corrected image.

32. A computer-readable storage medium storing a program used to direct a computer for estimating a tone level of an image to perform a process, comprising:

dividing an original image into a plurality of image sub-areas responsive to tone level information of pixels forming the image;

computing, by a processor, an average lightness for each of the plurality of sub-areas;

Deleted: and

computing a statistic amount for estimation of the lightness level of a whole of the original image using the average lightness for each of the plurality of sub-areas; and  
correcting the original image using the statistic amount.

***Allowable Subject Matter***

5. Claims 1, 14-15, 17-19 and 32-34 are allowed.

The following is an examiner's statement of reasons for allowance:

Applicant's amendments and remarks are found to be persuasive. No other found prior art of record teaches or fairly suggests the combination of claimed features as now recited. The previously cited references to Fuss and Nakai teach calculations of global and local histograms and suggest treating regions of images according to tone, but neither teach or fairly suggest the features of dividing the image according to tone and then computing the average lightness for the plurality of sub-areas, and computing a statistic amount of the whole image using the individual calculations and then correcting the image using a correcting parameter. No other found prior art of record teaches or fairly suggests the combination of claimed features as now recited.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
